Pocket Ledger

Shared budgets for a household, without the spreadsheet

Two people add expenses from their phones and see the month at a glance. This page is for the beta testers: what works today, and what comes next.

What the beta does

- Split an expense evenly, 60/40, or item by item
- Recurring bills, added on the day they fall due
- Amounts in whole cents, with the currency beside them
- The month at a glance, by category and by person

Coming next

- Import a bank’s CSV export
- A gentle nudge when a category runs over

Join the beta

Ask either of us at Friday’s demo and bring your phone. Lunch is focaccia.
